I'll try and explain about the night I saw the objects. Generally - it was dark and cloudy all around, and raining quite heavily. Before I saw the blue objects the area lit up. The light was bright white-like fluorescent.

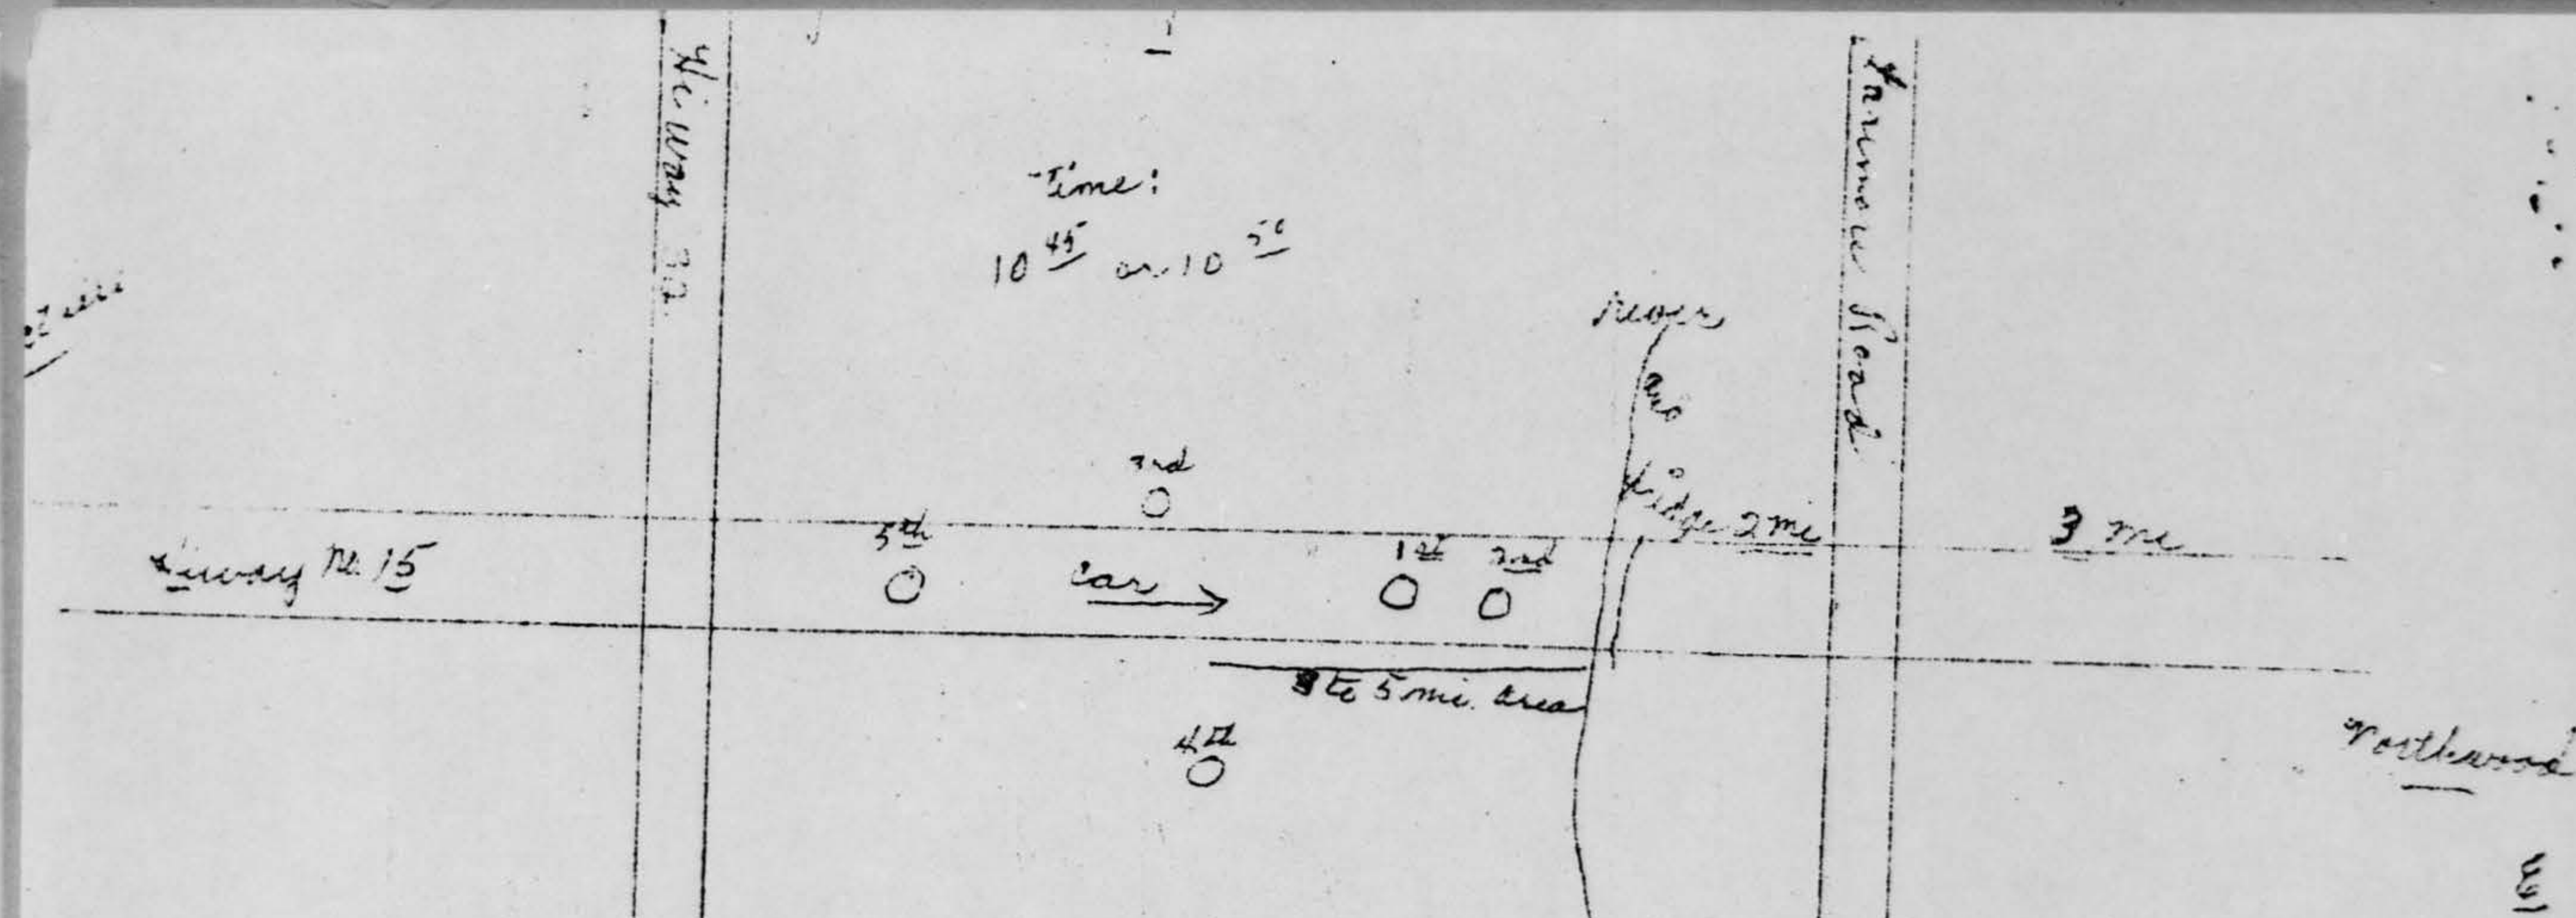

Ball ^{no 1} was maybe 1/2 mi. ahead. The area lit up, then the big ball was there - seemed to sit on the road. It disappeared after an instant. I drove slowly and ball ^{no 2} showed up in the same way. It seemed to turn and go to the left slightly & disappeared. I was quite startled by then.

Within seconds the bright light ^{no 3} came above the car to the left of where I sat. If the window had been open I could have reached the stars that burst from it. I don't remember a noise when it burst as it was so surprising anyway. Shortly after came the light ^{no 4} to the ~~right~~ ^{left} of the car & slightly higher up but noticable thru the corner of the windshield. It burst & was full of yellow stars also. I still hadn't gathered all my wits before the last light came ^{no 5} from the rear of the car. Everything was the same as other two and I looked in my rear view mirror and watched it.

I was really too excited to work that night but I did. And believe it or not, I stayed on the road thru it all - I think.

I've been really thrilled about this as it's mysterious and will be waiting till it can be explained.

Mess ~~_____~~
Kloten, N. Dak.

1 & 2 balls didn't show any stars.
 About the size of the blue balls;
 the 3, 4, & 5 were about the
 size of big plates or better.
 No. 1, and 2 were much larger
 about like a tub or less. At a
 distance 1 and 2 would be
 harder to judge the size.
 When it burst and the stars
 came down it was beautiful.

Notes

This is the best I can make
 so hope it helps some.
